

Atlas Copco

Power Focus 8 Family

Power Focus Offering

Smart Integrated Assembly

Challenges faced by factories

Today's production situations increasingly call for greater versatility to handle a higher product mix and additional variants on the assembly line. Production becomes more complex, and the human element also continues to be important, which is why user-friendly systems are essential.

In addition, with increasingly strict CO2 emission standards and higher demands on energy efficiency, sustainability is in sharp focus. Moreover, every production process has its own problems.

Why a Smart Factory?

Because this is the future. A Smart Factory is a digitized and highly automated manufacturing facility that uses connected devices, machinery, and production systems to continuously collect and share data. Data that is then used to improve processes as well as proactively address any issues that may arise along the production line.

Smart Factories are enabled by a variety of technologies including artificial intelligence, big data analytics, cloud computing and the industrial Internet of Things.

How Atlas Copco can take you one step closer

We call it Smart Integrated Assembly, our concept for industrial manufacturers looking to transform and implement Smart Factories.

Smart Integrated Assembly encompasses our portfolio, structure and ecosystem of hardware, software and service offerings providing unrivalled value in each step of our customers' product manufacturing cycles. It includes smart connected assembly tools for factories and field operations, fully integrated assembly line solutions from design to production, as well as a unique set of data driven services.

Now let us present our latest hardware controller and supporting equipment!

What you need in order to create a smart assembly

To use the Power Focus 8 controller, some additional parts are required: Power Focus IAM, Virtual Station, tool, and additional features.

The Power Focus 8 controller is the hardware interface between the line and the MES system which provides power and communication for tools and accessories. The Power Focus IAM acts as a storage unit with dual partitions with dedicated memory for upgrade, back-up and restore purposes.

With these in place, tools and Virtual Station types can be added. The Virtual Station types control the functionality available and feed our unique tool offering. They can be enhanced by adding features to match specific applications.

The Power Focus S is a stand-alone drive that can be operated as a secondary controller to the PF8, ideal for fixtured and multi-spindle applications. It has a 50% lower energy consumption compared to a controller.

Power Focus 8

A powerful controller for all your battery, cable and fixtured tools. Power Focus 8 is the center of our common tightening platform and has the ability to connect any cable or battery tool from our wide range.

With Power Focus 8 you can connect 20 tools simultaneously. It provides reduced infrastructure costs through access points and increased Wi-Fi range, has a familiar and improved user interface and enables seamless integration with our software ecosystem. Other advantages are reduced inventory costs and easy remote programming.

Power Focus S

The Power Focus S is a robust, standalone drive that can be operated as a secondary controller to Power Focus 8. It is available in a standard (1-phase) or a high-voltage (3-phase) version to support all kinds of cable tools or fixtured, multi-spindle applications.

The Power Focus S has LED indicators for product status and operational feedback for easy service and troubleshooting. The energy consumption of the Power Focus is 50% lower compared to a controller and it has a reduced environmental footprint.

Intelligent Application Module (IAM)

Intelligence in the palm of your hand. Software, tightening data and configuration – all important information in one compact format. Therefore, if an issue arises, you have an easily accessible back-up. Easy to upgrade with a rapid back-up function.

Two software areas allow for smart software management, enabling a much safer upgrade process, and always giving the possibility to switch between two software versions.

FMS Portable

The FMS Portable is a great option for you who does not have the controllers networked. With the Atlas Copco FMS Portable it is possible to load and distribute virtual stations and features to individual controllers.

Hardware Overview

Below you can find a brief overview of the Power Focus 8 hardware.

Virtual Stations

A Virtual Station is a digital version of a controller. It is a key component of our tightening platform. The Virtual Station determines the tool type and functionality supported, protocol support, type of data that is reported and more.

The Virtual Stations' different levels enable the control and connection of 15 different tool families.

Batch Control: Customer critical

Creates possibility to connect shut-off tools (BCV/P- Re) and click wrenches (MWR-S) to Power Focus 8. License enables addition of OK/NOK traceability for tightening operations.

Main values

- Batch counting ensures correct number of tightenings performed

Supported functionalities

- 1 program
- 1 sequence
- 4 identifier
- Only clutch step

Joint Control: Quality critical

For tightening applications with a limited number of variants, but where a torque controlled tool is required. Chosen where an air tool is being replaced and better control of the tightening process is needed.

- Torque controlled and angle monitored tightenings, programing options for joints not suitable for air tools
- Supports electric battery pulse tools (TBP-S)

- 1 program
- 1 sequence
- 4 identifier
- Torque control
- Angle monitoring

Station Control: Quality critical

Designed for stations offering more variants. Perfect for customers looking to replace multiple air tools with one electric tool, and where torque controlled tightenings are required.

- Possible to replace multiple air tools with one electric tool
- Supports torque controlled tightenings, improving accuracy compared to an air tool

- 16 programs
- 16 sequences
- 4 identifiers
- Torque control
- Angle monitoring

Critical Control: Safety critical

Designed for tightening applications requiring full traceability and process control. All tightening results stored in the controller and reported to external systems with tightening results and traces. A highly flexible setup for most tightening applications.

- Supports angle controlled tightening strategies
- Supports up to four VIN numbers connected to a result

- 250 programs
- 250 sequences
- 4 identifiers
- Torque control
- Angle control

Process Control: Safety critical

The highest level of Virtual Station type, built for extremely demanding tightening applications. Supports advanced tightening strategies required for safety critical tightenings with full traceability of the tightening.

- Supports advanced tightening strategies for safety critical tightenings
- Supports up to four VIN numbers connected to a result
- TrueAngle and Low Reaction Strategies included for the start

- 250 programs
- 250 sequences
- 4 identifiers
- Torque control / angle control
- Advanced tightening strategies

Sync Critical Control: Safety Critical

Designed for synchronized tightening in multi-spindle applications requiring full traceability and process control. All tightening results stored in the controller and reported to external systems with tightening results and traces. A highly flexible setup for most synchronized tightening applications.

- Supports angle controlled synchronized tightening strategies in multi-spindle applications

- 250 programs
- Up to 50 tools in one station
- Synchronized tightening in multi-spindle applications
- Torque control / angle control

Sync Process Control: Safety Critical

The highest level of functionality, built for extremely demanding synchronized tightening in multi-spindle applications. Supports advanced synchronized tightening strategies, including reject management, required for safety critical tightening with full traceability of the tightening.

- Supports advanced synchronized tightening strategies for safety critical multi-spindle applications
- Reject management

- 250 programs
- Up to 50 tools in one station
- Synchronized tightening in multi-spindle applications
- Advanced synchronized tightening strategies
- Reject management

Matching tools with Virtual Stations

Atlas Copco provides a full range of tightening tools, enabling you to pick the right tool for the application, with superior performance and ergonomics. Power Focus 8 has the possibility to connect tools from 15 families from our offer.

They range from clutch tools, Mechatronic wrenches and low reaction tools to advanced transducerized tools.

Power up your tightening stations

Give more functionality to a selected tool by adding features for specific applications. Additional features can be added to a Virtual Station that already has a type assigned, while a controller-wide feature impacts the whole IAM.

Virtual Station features

Low Reaction Strategies

TurboTight for STR tools and TensorPulse and TurboTight for SRB tools help minimize reaction force in tightening operations.

Values

- Improves ergonomics by eliminating reaction force; increased productivity due to faster tightening time
- Improves flexibility by eliminating reaction devices
- Reduces costs related to operator fatigue and injuries

TrueAngle

Compatible with STR tools only. Eliminates operator influence on the tightening angle during the full tightening phase. Can be added to a Critical or a Process Virtual Station.

Values

- Improves angle control, increasing tightening quality and accuracy
- Reduces need for reaction devices, savings on equipment and installation
- Detects common assembly problems

Open Protocol Extension

A Virtual Station feature that enables additional functionality while interacting with Open Protocol systems.

The feature has two functionalities. One is traces over Open Protocol, giving the possibility to transmit and analyze trace curve data in your interface of choice. The other allows the storing, modifying, and uploading of tightening programs in the Power Focus 8 controller.

Values:

- Reduces defects by controlling the tightening program from an external system
- Reports tightening traces to an external system

Yield Control

Yield Control enables a controlled strategy in the plastic zone by controlling the decrease in torque build-up when entering the plastic zone.

Values:

- Ensures consistent and high clamp force
- Gives the possibility to use smaller screws in an assembly process

Industrial Location Guidance

An integrated, stand-alone error proofing system offering high-level process security for simple to complex applications. Industrial Location Guidance tracks the exact location of the tool relative to the fastening position, ensuring the correct fasteners are tightened to specification, in the proper sequence.

Values:

- Improves quality through reduction in scrapped parts and implementation of forced order operation
- Increases productivity due to improved operator efficiency
- Reduces job setup and programming time, resulting in reduced costs

Controller-wide features

SoftPLC

A controller-wide feature normally used in multi-spindle applications. Allows connection of up to six Power Focus 8 controllers and synchronized tightenings of cable tools. One SyncReference handles all programming, configuration, and result handling.

Values:

- Improves control of the tightening process
- Reduces cost and installation time
- Ensures commonality in the production line by having the same controllers and tools

Zero Position

The Zero position is a specific position stored with either a "Set Zero Position" step or the signal "Set Zero position". The position is repeated once every 360 degrees. The signal is ignored if it is sent during ongoing tightening. The position is reset at boot of the controller and the current position of the tool is then used. Same if a switch of tool is done, a new Zero position will be saved during start up with the new tool.

When the new tightening strategy is selected, the tool will rotate to this set zero position at trigger

press. In the new Multistep steps, there is a possibility to select direction when returning to zero position.

The Zero position will be included in the "Process control" license. Zero Position will be an add on feature to the "Critical Control" license.

Values:

- To set a fixed position before performing a tightening
- To ensure the tightening starts from same position every time and are done in the same way every time

Workstation Solutions – Total process control

In the Smart Connected Ecosystem, Atlas Copco provides comprehensive Total Workstation Solutions, incorporating reaction supports such as arms, visualization equipment, positioning solutions, and error-proofing accessories. To further enhance productivity and quality assurance, Atlas Copco offers an advanced assembly software suite that enables the collection and analysis of tightening data, as well as efficient management of quality control.

Additionally, Atlas Copco offers station control and work guidance solutions through their Smart AMS and SQS solutions. These solutions provide effective support in optimizing operations and streamlining workflow processes.

For detailed information regarding these solutions and their corresponding order numbers, we recommend reaching out to your dedicated Atlas Copco sales representative. They will be able to assist you with any inquiries and guide you through the selection process.

Service Solutions from Atlas Copco

At Atlas Copco service, we create the best value from your investments

Every production line and industrial site is unique and has its own challenges. With that in mind, our service solutions are designed to help you get the most out of your industrial equipment. We combine analysis of production data with know-how and expertise to enhance your productivity and quality, while maximizing the cost efficiency of your maintenance.

For Power Focus 8, tools and software, we can provide a wide range of services

- Startup, calibration and programming of the tightening system.
- Optimized maintenance solutions for cost savings and higher uptime.
- Operator training on systems and products.
- Tightening Services – a consultancy service for optimized tightening results.

Atlas Copco offers worldwide service

- We have a global presence and can support you at every step of the assembly production process.
- Standard service products and tailor-made solutions are available.

Contact Us

As your dedicated assembly partner, we have the technology you need to handle the production challenges of today and in the future. Our Smart Integrated Assembly ecosystem will meet your needs and keep your operation ahead of the game.
